

Is your Manufacturing company ready for Digital Transformation?

Business models

Expand beyond traditional boundaries

- Digitally connected supplier network
- Monetization of services around smart devices
- Omni-channel sales and distribution

Business processes

Operate proactively and driven by insight

- Predictive real-time analytics
- Automation throughout the value chain
- Detail-driven customer engagement

Workforce productivity

Allocate people and work for optional engagement

- Digital business processes
- Predictive, self-guided learning
- Interactive technologies

Five trends that are changing the world for manufacturing companies

HYPERCONNECTIVITY

In a digital economy, we are witnessing an explosion in connections at the business, individual, and machine level, enabling new insights and agile business processes across the complete value chain.

SUPER COMPUTING

In-memory computing enables managers to make informed decisions based on real-time information, identifying challenges and solving them before they become a problem.

CLOUD COMPUTING

Cloud computing and hybrid deployment models accelerate time to value, drive higher adoption of new technologies, and connect value chains in real time.

SMARTER WORLD

Robots, artificial intelligence, and smarter products reshape value chains and enable new business models. Drones enable not only a different delivery method, but also completely new service and maintenance models.

CYBER SECURITY

Several recent high-profile and massive data breaches have made securing customer and financial data a top priority for CIOs. Technology and proper governance are required for all data, interactions, identities, and business partners – any vulnerability could lead to catastrophe.

Why SAP?

BUSINESS DIGITIZATION IS A NATURAL NEXT STEP FOR THE **#1 BUSINESS APPLICATION COMPANY**

It took years of innovation, strategic investment, and the forging of new strategic relationships to build the end-to-end digital business platform.
